

Turbonomic 4-Hour Remote Training Agenda

The goal of this instructor-led, remote training is to ensure that you feel comfortable using Turbonomic as your control platform. You will learn how to leverage the intelligent analytics and automation to assure performance, maximize efficiency and guarantee compliance with your business policies. The training will consist of a 4-hour session, comprised of 50% lecture and 50% live walkthrough using your instance of Turbonomic.

Welcome & Introductions

Discuss your expectations from training

Technology Overview

Understand what drives the Turbonomic platform to converge your environment to a Desired State

User Interface (UI) Walkthrough

Learn how to use the Turbonomic UI to visualize the health of your environment and understand actions

Enforcement

Set up groups, policies, and configuration settings to comply with business constraints

Administrative Settings

Set up users, specify targets, and update software in your Turbonomic environment

Planning

Run "what-if" scenarios to simulate adding or removing various entities on-prem or in the cloud

Dashboards and Reports

Learn about creating dashboards and reports to provide the information you care about
