

# TURBONOMIC CORPORATE OVERVIEW

## WHY TURBONOMIC

Are you under pressure to transform your IT organization? Is innovation more easily talked about than done? Dana Deasy, CIO of JPMorgan Chase, cites that IT organizations spend 90 percent of their time and capital simply keeping the lights on and just 10 percent innovating. His goal at JPMC is to drive this ratio to 50/50. This challenge plagues almost every enterprise today, whether they have directly confronted it or not.

Hybrid cloud and cloud native trends offer transformational benefits to the business. But they introduce greater complexity for you.

Turbonomic was built on the premise that today's virtualized and cloud environments are beyond human scale to manage. We believe that when software does what it does best, people can do what they do best.

**30%** FASTER  
RESPONSE TIME

**30%** MORE  
TRANSACTIONS

**30%** LESS  
INFRASTRUCTURE

**30** MINUTE  
INSTALLATION

**30** DAY ROI

---

“Turbonomic’s technology is helping JPMorgan Chase optimize our environments, supporting a move from reactive to predictive workload management.”

George Sherman, Managing Director, JPMorgan Chase

# TURBONOMIC CORPORATE OVERVIEW

## TURBONOMIC HYBRID CLOUD MANAGEMENT

Turbonomic is the only Workload Automation Platform that continuously analyzes workload consumption, costs and compliance constraints in your environment and automatically allocates resources in real-time. It assures performance by giving workloads the resources they need when they need them.

Launched in 2010, Turbonomic is one of the fastest growing technology companies and is trusted by over 1700 customers to simplify and accelerate their hybrid cloud journey.

## SUPPORTED PLATFORMS

Turbonomic complements any cloud or cloud native architecture, whether it is VMware, Hyper-V, OpenStack, Docker, Red Hat OpenShift, AWS, Azure or a heterogeneous combination.

## IMMEDIATE TIME TO VALUE

- Deploys as a single virtual machine in any environment
- Delivers value in minutes – no new databases to configure, no thresholds to set, no time to learn what is “normal” in the environment – and provides actionable improvements in 30 minutes or less
