

Turbonomic ACE Certification Training Agenda

The goal of Turbonomic ACE Certification is to build expertise in the Turbonomic Autonomic Platform. Learn how to leverage the intelligent analytics and automation to converge your environment towards a desired state in which performance is assured, and the environment is running as efficiently as possible.

Day 1

Welcome/Introductions

Discuss your expectations from training

Technology Overview

Lab Exercises

Understand what drives the Turbonomic platform, enabling you to assure performance, maximize efficiency, and guarantee compliance

UI Walkthrough

Lab Exercises

Learn how to use the Turbonomic user interface to visualize the health of your environment and understand what actions to take to keep your environment running in a desired state

Enforcement

Lab Exercises

Set up groups, policies, and configuration settings to comply with business constraints, such as administrative domains, high availability, maintenance windows, licensing, and data locality

Administrative Settings

Lab Exercises

Set up users, specify targets, and perform software updates in your Turbonomic environment

Day 2

Planning

Lab Exercises

Run 'what-if' scenarios to simulate adding or removing VMs, hosts, and storage on-prem or in the cloud

Reports & Dashboards

Lab Exercises

Customize the look and feel of your Turbonomic interface; create dashboards and reports to provide the information you care about

Integrations Overview

Lab Exercises

Understand how Turbonomic integrates with third-party and legacy systems, including REST API, Action Scripts, and SDK's

Journey to the Cloud

Lab Exercises

Examine how Turbonomic can help you migrate workload to the cloud, understand and save costs, assure performance of resource-constrained workloads in the cloud, and enforce compliance across a hybrid environment

Day 3

Exams

Multiple-Choice exam
Practical exam
