

Turbonomic Two-Day Training Agenda

Learn how to leverage the intelligent analytics and automation to converge your environment towards a desired state in which performance and compliance with business policies are assured, while the environment is running as efficiently as possible

Day 1

Welcome/Introductions

Discuss your expectations from training

Technology Overview

Lab Exercises

Understand what drives the Turbonomic platform, enabling you to assure performance, maximize efficiency, and guarantee compliance

UI Walkthrough

Lab Exercises

Learn how to use the Turbonomic user interface to visualize the health of your environment and understand what actions to take to keep your environment running in a desired state

Policies

Lab Exercises

Set up policies to comply with business constraints, such as administrative domains, high availability, maintenance windows, licensing, and data locality and learn how to create custom groups

Day 2

Planning

Lab Exercises

Run 'what-if' scenarios to simulate adding or removing VMs, hosts, and storage on-prem or in the cloud

Templates

Lab Exercises

Learn about VM template types and use templates to add workload, hosts, or storage to a plan

Analysis Settings

Lab Exercises

Configure analysis settings to control Turbonomic Market analysis

Administration Settings

Lab Exercises

Set up users, specify targets, and perform software updates in your Turbonomic environment

Dashboards & Reports

Lab Exercises

Customize the look and feel of your Turbonomic interface and create dashboards and reports to provide the information you care about
